Re: (1) ET Docket No. 94-124 U

(2) RM-8648

(3) RM-8653

Dear Mr. Caton:

The attached "Statement of Ex Parte Contact" is submitted for the record pertaining to the above three references. This filing is made on behalf of and for the convenience of the Fixed Point-to-Point Section of the Telecommunications Industry Association (TIA), Mr. George Kizer, Chairman.

Respectfully submitted,

FLETCHER, HEALD & HILDRETH, P.L.C.

FX PARTE OR LATE FILED

STATEMENT OF EX PARTE CONTACT

On December 1, 1995, the following participated in a briefing and discussion with Mr. John Williams of the Office and Plans Policies:

- (1) Mr. George Kizer Alcatel Network Systems
- (2) Mr. Denis Guill Alcatel Network Systems
- (3) Mr. Denis Couillard Harris Corporation Farinon Division
- (4) Mr. Jimmy Hannan Digital Microwave Corporation
- (5) Mr. L. R. Raish Fletcher, Healed & Hildreth

The above listed persons were speaking on behalf of the Fixed Point-to-Point Section of the Telecommunications Industry Association (TIA). Mr. George Kizer is Chairman of the Section.

The briefing dealt with two subject areas, viz.

- (1) Use of Radio Frequencies Above 40 GHz
- (2) High Performance Radio Local Area Network (HIPERPLAN)

With regard to (1) the presentation was made by Mr. George Kizer using the viewgraphs in Attachment A hereto. As regards (2) above, the presentation was done by Mr. Denis Couillard using the viewgraphs in Attachment B hereto. The ensuing discussion was focussed on the two Attachments, essentially on a page-by-page basis. The two presentations lasted approximately one hour.

Attachment A: "Use of Radio Frequencies above 40 GHz"

Attachment B: "HIPERPLAN"

Use of Radio Frequencies Above 40 GHz

Presentation to the FCC OET

Washington, D. C. December 1, 1995

Electromagnetic Radiation Frequencies

Frequency Range

3 to 30 Hertz

30 to 300 Hertz

300 to 3000 Hertz

Designation

Subsonic

ELF-Extremely Low Frequency

VF-Voice Frequency

VLF-Very Low Frequency

LF-Low Frequency

MF-Medium Frequency

HF-High Frequency

VHF-Very High Frequency

UHF-Ultra High Frequency

SHF-Super High Frequency

EHF-Extremely High Frequency

Sublight and Infrared

Light (Infrared)

Light (Infrared)

Light (Infrared to Ultraviolet)

X-Rays

Gamma Rays

^{*} Earth's Average Diameter = 12.74 Megameters

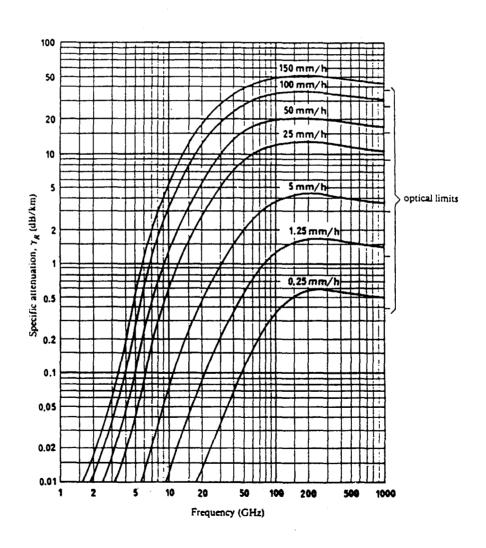

[•] Average Hair's Diameter = 100 Microns

- Atmospheric effects more pronounced
- Quasi-optical properties
- Diffraction, scattering and absorption more pronounced

Atmospheric Gas Attenuation

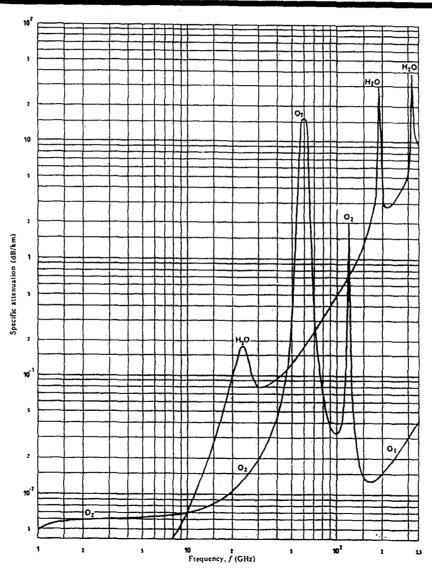

FIGURE 3 - Specific attenuation due to atmospheric gases

- High attenuation regions at roughly 60, 118 and 183 GHz
 - Typically used for very short or indoor systems
- Low attenuation regions at roughly 35, 94, 140 and 220 GHz
 - Typically used for outdoor applications

- Higher transmission throughput (due to wide bandwidth)
- Reduced component size
- Reduced antenna size with more practical options
 - reflectors, horns, lenses, planar arrays, dielectric rods
- High gain
- Enhanced immunity to interference
 - Due to higher path attenuation and narrow beamwidths

- Limited range
 - low transmit power
 - high noise figure
 - highly variable path attenuation
 - back scatter from rain and moving objects
- Difficulty in acquiring and maintaining path (due to narrow beam widths)
- Cost and availability of components
- Cost of manufacturing (due to small size)

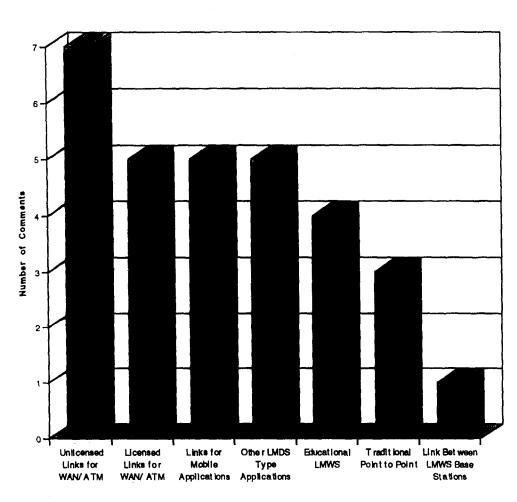

- Communication Systems
- Radar Systems
- Traffic control and monitoring
- Intrusion alarm and monitoring
- Optical like viewers (viewing through smog and fog)
- Radio Spectrography
- Instrumentation/Medical

Probable Communication Applications

- Traditional Private and Common Carrier
- Mobile voice and data networks
- WAN/LAN interconnection
- Super wideband (ATM/SONET) access
- Super wide bandwidth (uni- and bidirectional, point to point or multipoint) broadband distribution (T1/T3, access, multimedia, education, TV)
- Support for future telecom systems
 - Intelligent Transport System (ITS)
 - National Information Infrastructure(NII)

Above based upon comments to Use of Radio Frequencies Above 40 GHz (ET Docket 94-124, January 1995)

Support for global harmonization of radio frequency allocations:

- European Radiocommunications Committee (ERC) of European Conference of Postal and Telecommunications Administrations (CEPT)
- Fixed Point to Point Section of Telecommunications Industry Association (TIA)
- American Telephone and Telegraph (ATT)
- Teledesic Corporation

Above based upon comments to Use of Radio Frequencies Above 40 GHz (ET Docket 94-124, January 1995)

Fixed Service Microwave should get high frequency allocations FOR:

- Hughes Aircraft Company Communications Product Unit (HCP)
- Fixed Point to Point Section of Telecommunications Industry Association (TIA)

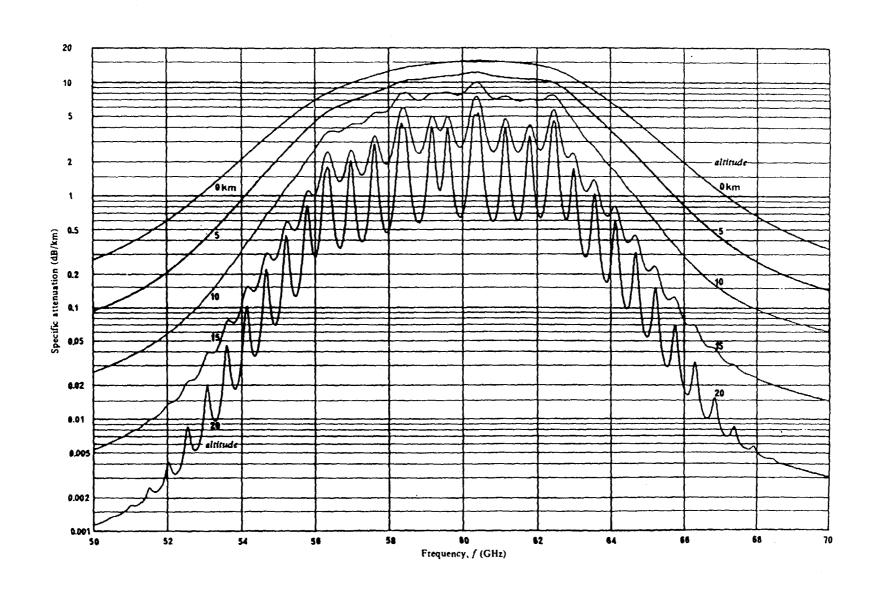

AGAINST:

National Aeronautics and Space Administration (NASA)

- TIA requested 48.5 to 51.4 GHz and 55.2 to 58.2 GHz
- NASA objected to 55.2 to 58.2 allocation
 - Absorption band needed for satellite earth studies
 - Europeans really not planning to use band

There's Absorption Band Room to Share!

- Frequencies above 40 GHz have many applications
- Internationally harmonized Fixed Service applications should be among them

HIPERLAN

presentation to the FCC OET

by

the fixed point-to-point communications section of TIA

Washington, Dec 1st, 1995

TIA

INDUSTRY ASSOCIATION

HIGH PERFORMANCE RADIO LOCAL AREA NETWORK (HIPERLAN)

SERVICES AND FACILITIES

Source = ETSI ETR 069, February 1993

TIA
INDUSTRY ASSOCIATION

What is HIPERLAN?

 High speed short distance radio links between computer systems

 Untethered access to computer systems, whether located nearby or remotely

Same performance as wired LAN

HIPERLAN APPLICATIONS:

Voice, Video & Data Services

- ◆ Office automation
- ◆ Financial services
- ◆ Medical & hospital systems
- Education and training
- ◆ Industrial automation
- ◆ Ad-Hoc networking

HIPERLAN CARACTERISTICS:

- No explicit frequency planning or coordination
- ◆ Capable of handling up to 22 miles/hr mobility
- PCMCIA type III compatibility (low power allows portability)
- ◆ Common air interface
- ◆ Data services up to 20 Mb/s
- ◆ Range is 0.5 mile at 1 Mb/s 165 feet at 20 Mb/s
